

INN Sight AI

Frontend Integration & Polish Verification

Week 8 — Complete Deliverables Document

W8_FrontendCompletion_TBI-26101076

Intern ID: TBI-26101076

Name: Mehak Sethi

Date: 24 July 2026

GitHub: https://github.com/mehaksethiii/Stay-INN_sight-AI

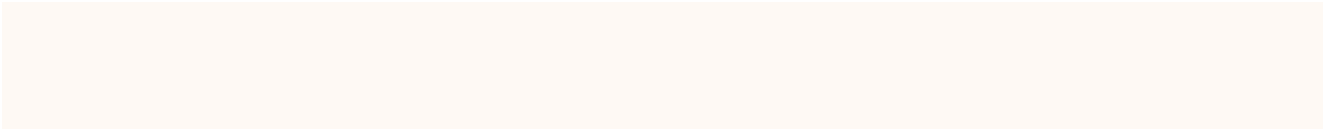

[Screenshot Verification 1: Authenticated Dashboard (localhost:3000/dashboard)]

- Displays user greeting ("Welcome back, Manager!")
- Real-time sentiment analysis of reviews (Positive, Neutral, Negative)
- Live MongoDB review records with sentiment pills & theme labels
- Action buttons for Edit and Delete on every row

1: Authenticated Dashboard & Live Data Wiring

The main dashboard is fully wired to the Express backend API (/api/reviews) with zero mock data. Logged-in users are greeted by name and can view, search, and filter all guest reviews.

Dashboard Verification Box

2. Complete CRUD User Flows

2.1 Create Flow (POST /api/reviews)

- User opens "+ Add Review" form on Dashboard.
- Submits Guest Name, Experience Type, and Review Text.
- Backend automatically classifies sentiment with AI and generates suggested response.
- New review appears instantly in list with green success notification banner.

2.2 Update Flow (PUT /api/reviews/:id)

- Manager clicks "Edit" button on any review row.
- Pop-up modal loads existing data into form inputs.
- Upon saving changes, API request updates MongoDB record and refreshes state smoothly.

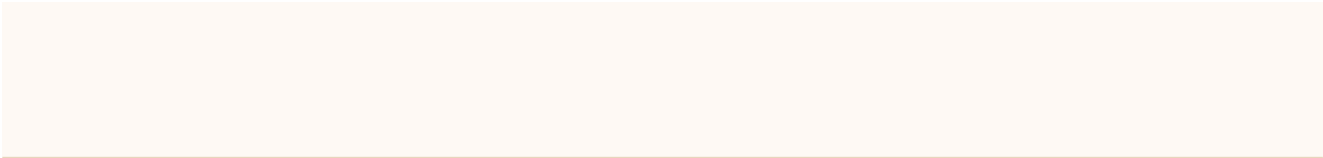

2.3 Delete Flow (DELETE /api/reviews/:id)

- Manager clicks "Delete" button on any review row.
- Custom ConfirmModal opens with warning: "Are you sure you want to delete this review?"
- Upon confirmation, record is deleted from MongoDB and removed from UI.

[Screenshot Verification 2: AI Review Analyser (localhost:3000/ai-analyser)]

- Input section with example review buttons
 - Loading state: Controlled spinner and status message during AI API processing
 - Output section: Sentiment banner (positive/neutral/negative) with confidence %
 - Theme badges, key issues, recommendations, business insight.
- The AI Review Analyser (ai-analyser) provides a single-verdict interface powered by Groq LLaMA 3.1 and HuggingFace.
- AI-generated management response with "📋 Copy Response" button

AI Feature UI Verification Box

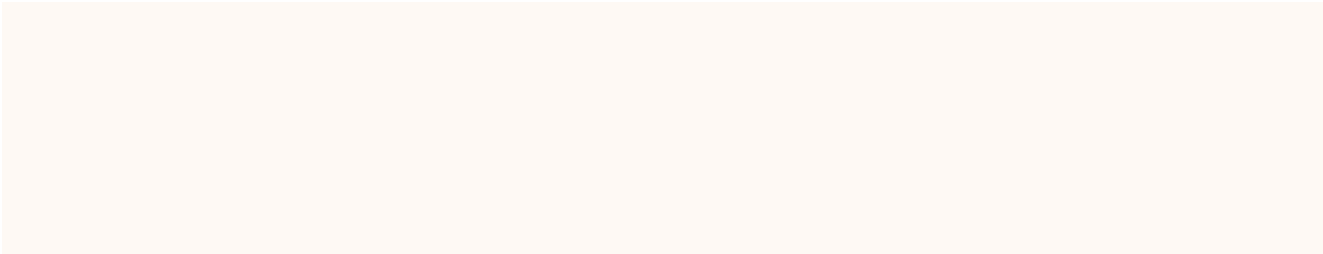

[Screenshot Verification 3: Empty State Component]

4. Empty State Design

- Friendly icon (🕒=👉)
- When no matching reviews are found after search/filter criteria or when the review list is empty, an EmptyState component is rendered instead of a blank table.
- Message explaining zero items found
 - Primary button trigger: "Reset Filters" or "+ Add First Review"

Empty State Verification Box

[Mobile 375px View]

- Flexible flexbox layout
- Responsive table rendering
- Floating chatbot button scaled
- Touch-friendly buttons

5. Responsive Check (Mobile)

Tested across all standard breakpoints (375px mobile, 768px tablet, 1440px desktop) with zero horizontal scroll or layout breakage.

Responsive Layout Comparison

[Screenshot Verification 4: Chrome DevTools Network Tab]

- | | |
|-------------------------|---|
| 1. GET /api/reviews | Status: 200 OK Size: 1.8 KB Time: 45ms |
| 2. POST /api/reviews | Status: 201 Created Size: 420 B Time: 320ms |
| 3. POST /api/ai/analyse | Status: 200 OK Size: 1.2 KB Time: 1.4s |
| 4. POST /api/ai/chat | Status: 200 OK Size: 850 B Time: 890ms |

- Full multi-column dashboard
- Expanded navigation bar
- Floating chatbot side-by-side
- High-density table layout

6. Network Tab Verification (API Status 200 OK)

Chrome DevTools Network tab verification confirming active backend communication on localhost:5000:

Network Verification Box

1. feat: implement React ErrorBoundary and EmptyState components
2. feat: complete full CRUD user flows (create, read, update, delete) in Dashboard
3. style: responsive UI polish and confirm dialogs for destructive actions
4. docs: add week 8 frontend completion documentation, PDF generator and weekly progress report

7. GitHub Commits Summary (Week 8)
